Project Details:

Project Platform: Desktop

Project Title: Inventory Management System.

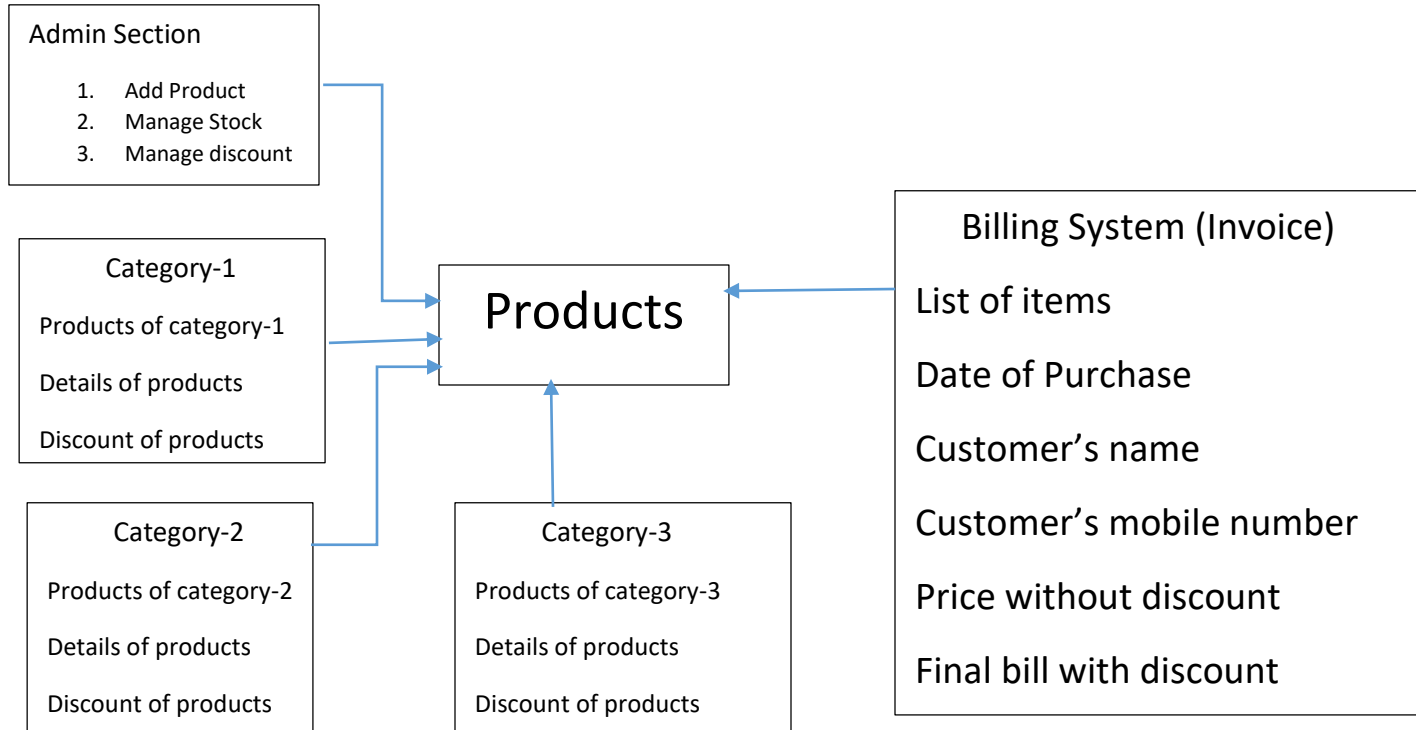

Project Details:

In this project we will build a software for a CD shop for inventory management and billing system. The products will be categorized by their genre. Then the products will be in the category of its genre and customer need to select the category of the genre first in order to purchase them. It will be a benefit for both shop owner and customers. The customers will be able to see all the similar kinds of products together. Then after the customer is done with all the purchasing the software will ask to generate bill from the customer and it will generate bill with discount if there is any discount available for any kind of product.

Features:

1. Categorized products with details.
2. Easy to access.
3. Can be categorized according to available stocks or price.
4. Automatic generation of bill including discount.
5. Easy to access for admin.
6. Easily manageable for owners.

Flow Chart:

Conclusion:

This is an inventory management system will be built in **Java** and the GUI will be designed using **Swing**.
